

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

Quality Compass is an indispensable tool for examining quality improvement and benchmarking plan performance.

Customized Reports

Researchers are able to generate custom reports by selecting measures and benchmarks for up to 3 years of trended data. Results are offered in table or graph format.

Data Exporter

This option features downloads, custom-built reports as well as the complete All-Measure Download directly from the online tool into spreadsheets for enhanced analysis and research opportunities. Also included with the Data Exporter are confidence intervals.

This is a set of measures based on records of services received and is designed to describe how well a system of care or insurance plan is providing substance use disorder treatment.

- **Identification Rate** is defined as the number of individuals identified as needing substance treatment divided by the number in the eligible population in the past year.
- **Initiation Rate** is defined as the number of individuals who are admitted to treatment (or receive subsequent substance use disorder treatment service) within 14 days of initial assessment divided by the number identified within the past year.
- **Engagement Rate** is the percent of individuals who received two additional services within 30 days divided by the number of people initiating treatment within the past year.
- **Continuing Care Rate** is the percent of people who initiate outpatient treatment within 14 days after discharge from residential treatment.
